Interactive Dashboards and Data Apps with Plotly and Dash:

Harness the power of a fully fledged frontend web framework in Python – no JavaScript required

1st Edition, Kindle Edition

by [Elias Dabbas](#) (Author) | Format: Kindle Edition

4.4 ★★★★★ (64)

[See all formats and editions](#)

Build web-based, mobile-friendly analytic apps and interactive dashboards with Python

Key Features

- Develop data apps and dashboards without any knowledge of JavaScript
- Map different types of data such as integers, floats, and dates to bar charts, scatter plots, and more
- Create controls and visual elements with multiple inputs and outputs and add functionality to the app as per your requirements

Book Description

Plotly's Dash framework is a life-saver for Python developers who want to develop complete data apps and interactive dashboards without JavaScript, but you'll need to have the right guide to make sure you're getting the most of it. With the help of this book, you'll be able to explore the functionalities of Dash for visualizing data in different ways.

Workshop!

**Tomorrow
Morning Session
After Coffee Break**

Houston, we have a [keyword] problem!

"When some field is just getting started and you don't really understand it very well [***Data Science***], it's very easy to confuse the essence of what you're doing with the tools that you use [***Python***]."

Harold Abelson - MIT

SEO

- Keyword research

- **Python**
- Also: “coding”, “automation”

You don't need
Python to do SEO!

I don't.
But I'm enjoying it &
you're not.

SEOflencer

`pip install adverttools`

Data skills **in the trenches**

Minimum Viable Knowledge

Variables

name = value

B2

✕

✓

<

D	E
	=b2+5

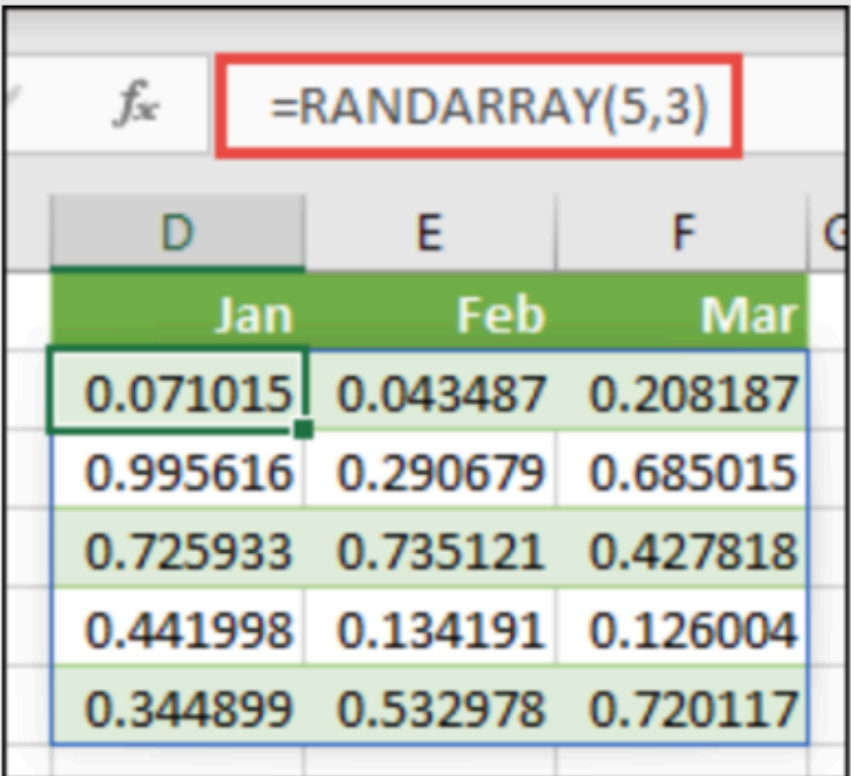

- B2 = 10+5
- name = value (potentially a complex formula)
- = is the “assignment operator”

Functions

RANDARRAY function

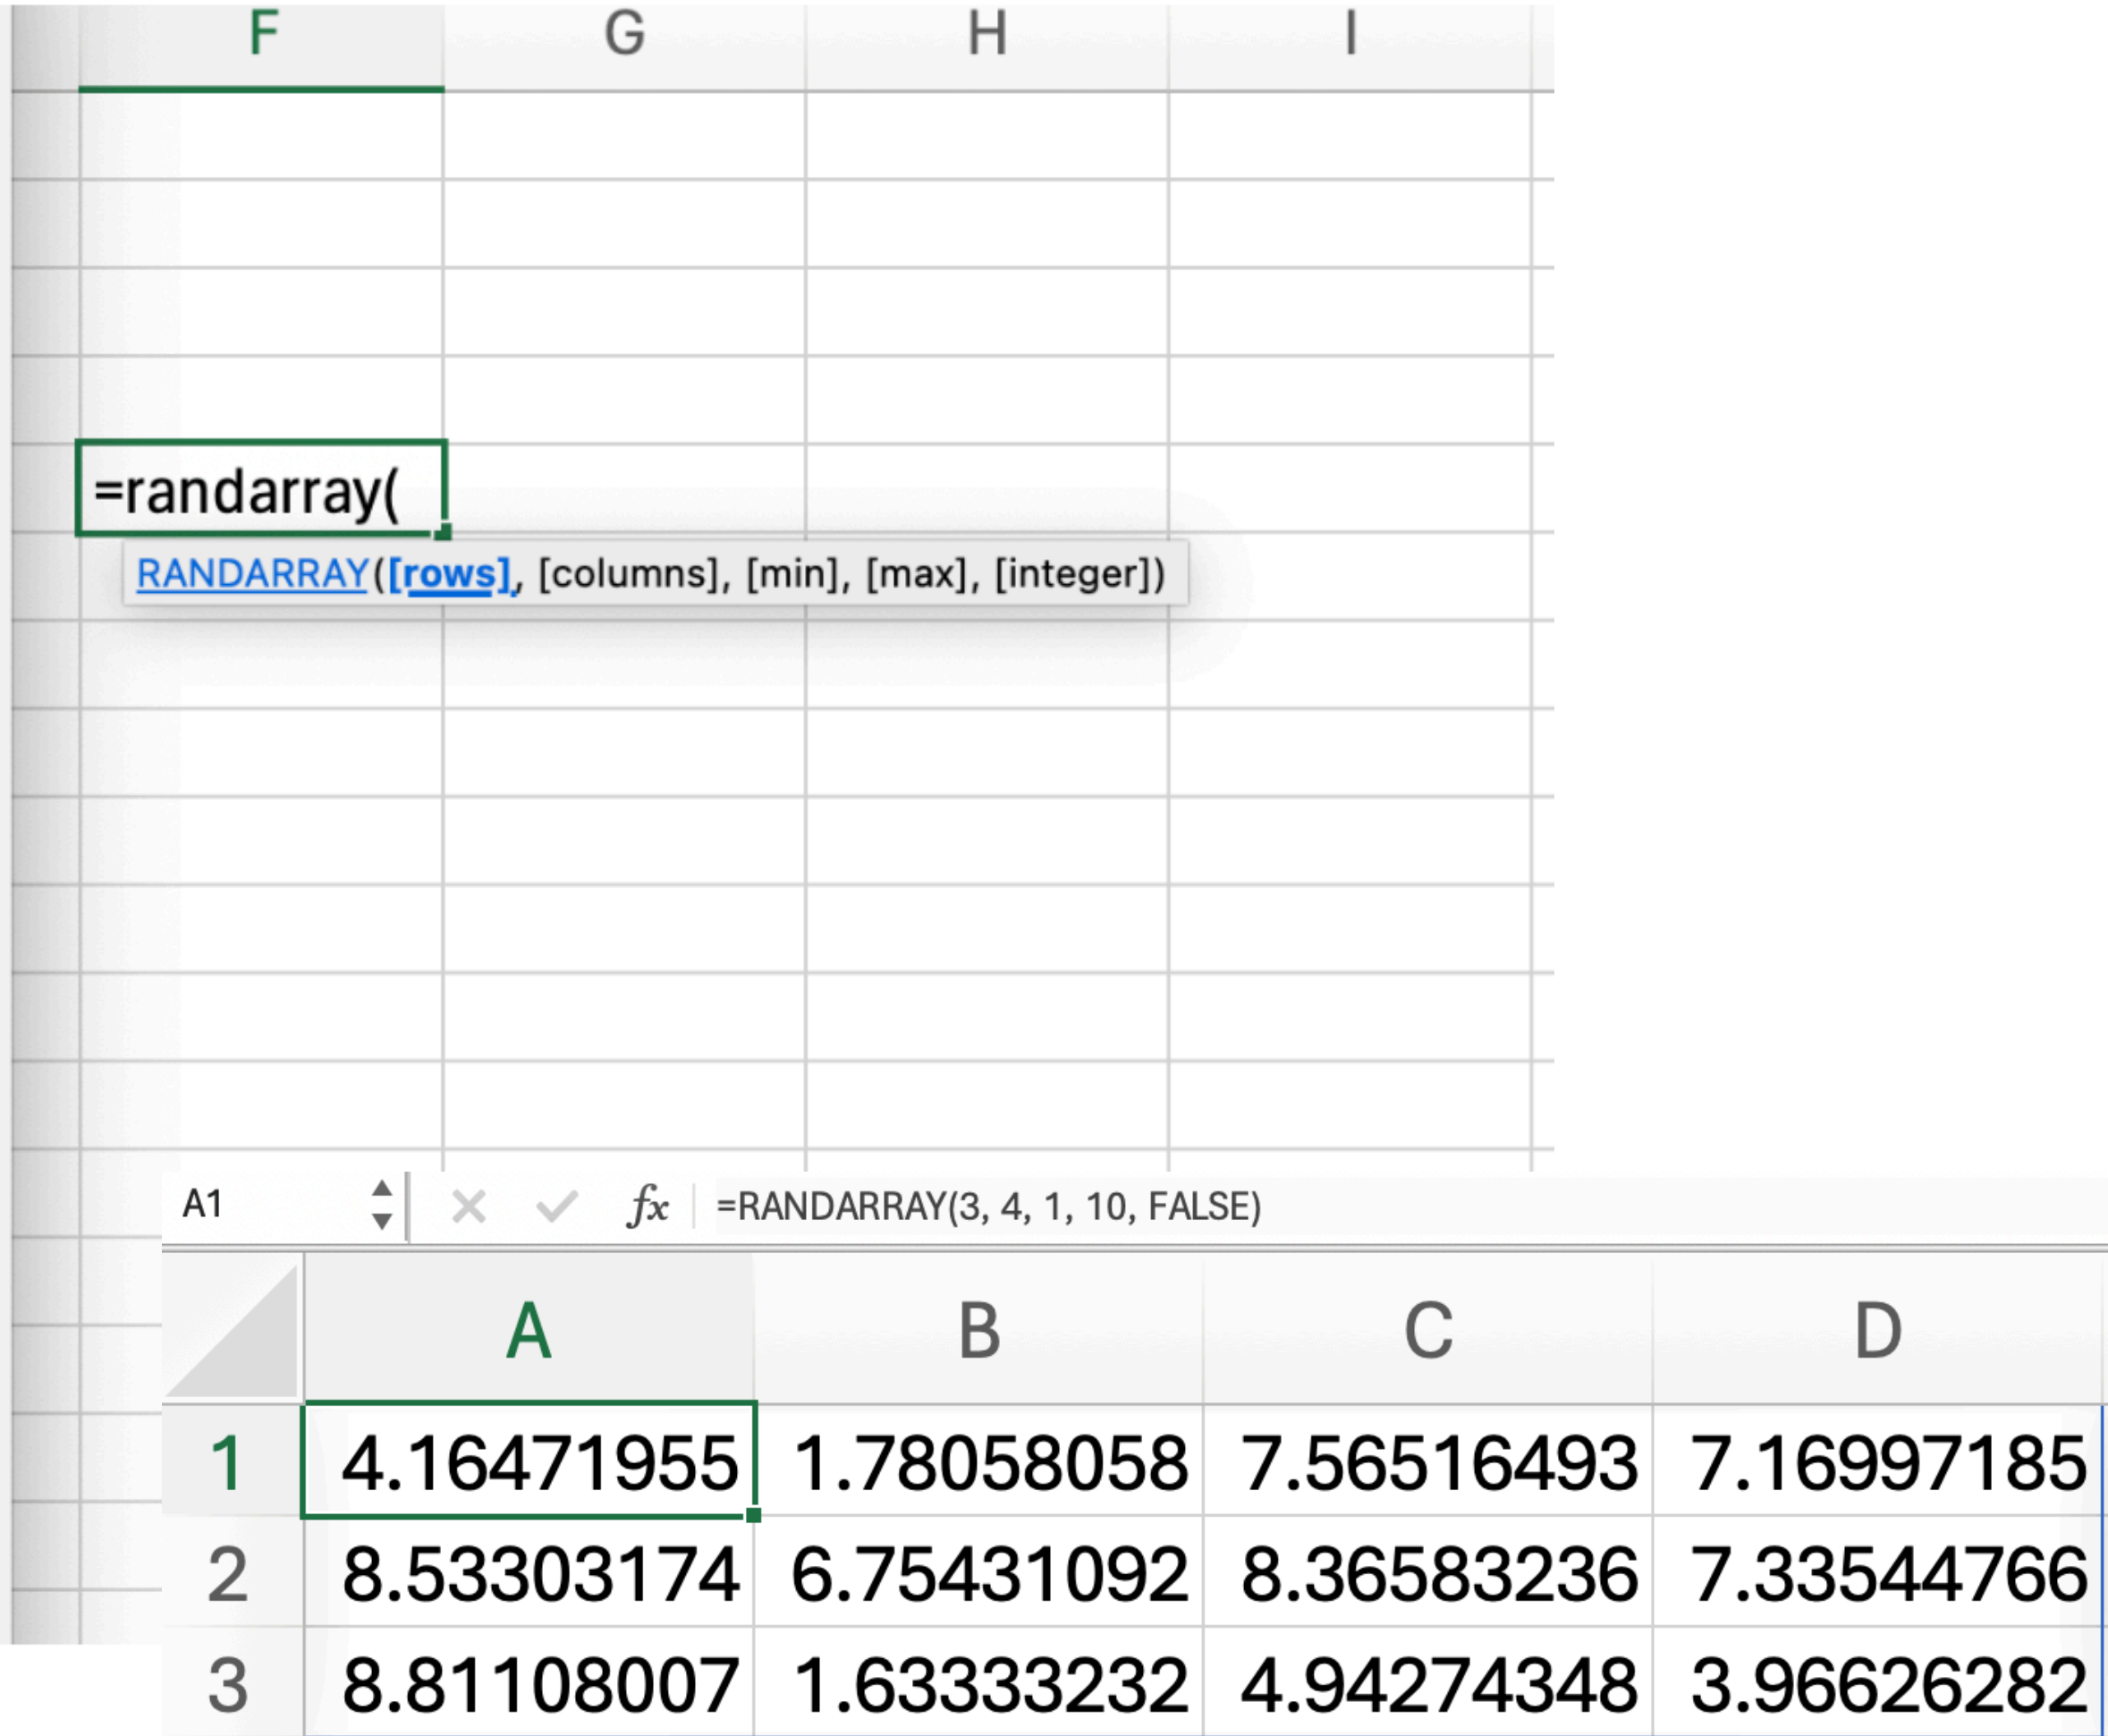

The **RANDARRAY** function returns an array of random numbers. You can specify the number of rows and columns to fill, minimum and maximum values, and whether to return whole numbers or decimal values.

In the following examples, we created an array that's 5 rows tall by 3 columns wide. The first returns a random set of values between 0 and 1, which is RANDARRAY's default behavior. The next returns a series of random decimal values between 1 and 100. Finally, the third example returns a series of random whole numbers between 1 and 100.

The screenshot shows the Excel formula bar with the formula `=RANDARRAY(5,3)` entered. Below the formula bar, a 5x3 array of random decimal values is displayed, with columns labeled Jan, Feb, and Mar.

	Jan	Feb	Mar
1	0.071015	0.043487	0.208187
2	0.995616	0.290679	0.685015
3	0.725933	0.735121	0.427818
4	0.441998	0.134191	0.126004
5	0.344899	0.532978	0.720117

The screenshot shows the Excel formula bar with the formula `=RANDARRAY(3, 4, 1, 10, FALSE)` entered. Below the formula bar, a 3x4 array of random decimal values is displayed, with columns labeled A, B, C, and D.

	A	B	C	D
1	4.16471955	1.78058058	7.56516493	7.16997185
2	8.53303174	6.75431092	8.36583236	7.33544766
3	8.81108007	1.63333232	4.94274348	3.96626282

`=FUNCTIONNAME(parameter_1, parameter_2, parameter_3, ...)`

Right-click (contextual functions)

Do you know Excel?

**Do you know/use more than 10%
of Excel's features?**

Do you build Excel plugins?

Become a Python ~~developer~~ **user**

How much Python do I need to learn for Data Science?

How much HTML do you need to learn for SEO?

**How does Data Science
relate to AI and LLMs?**

Data Science is much more relevant, approachable, and useful with LLMs

- Running prompts in bulk is key differentiator/power
- The minimum viable knowledge is much lower since LLMs can write code for you (but you are responsible for it!)
- The more you structure your prompts, the less likely you will get hallucinations

The dance between (un)structured tasks

LLMs / AI

Great with unstructured
data & fuzzy tasks

Traditional Software

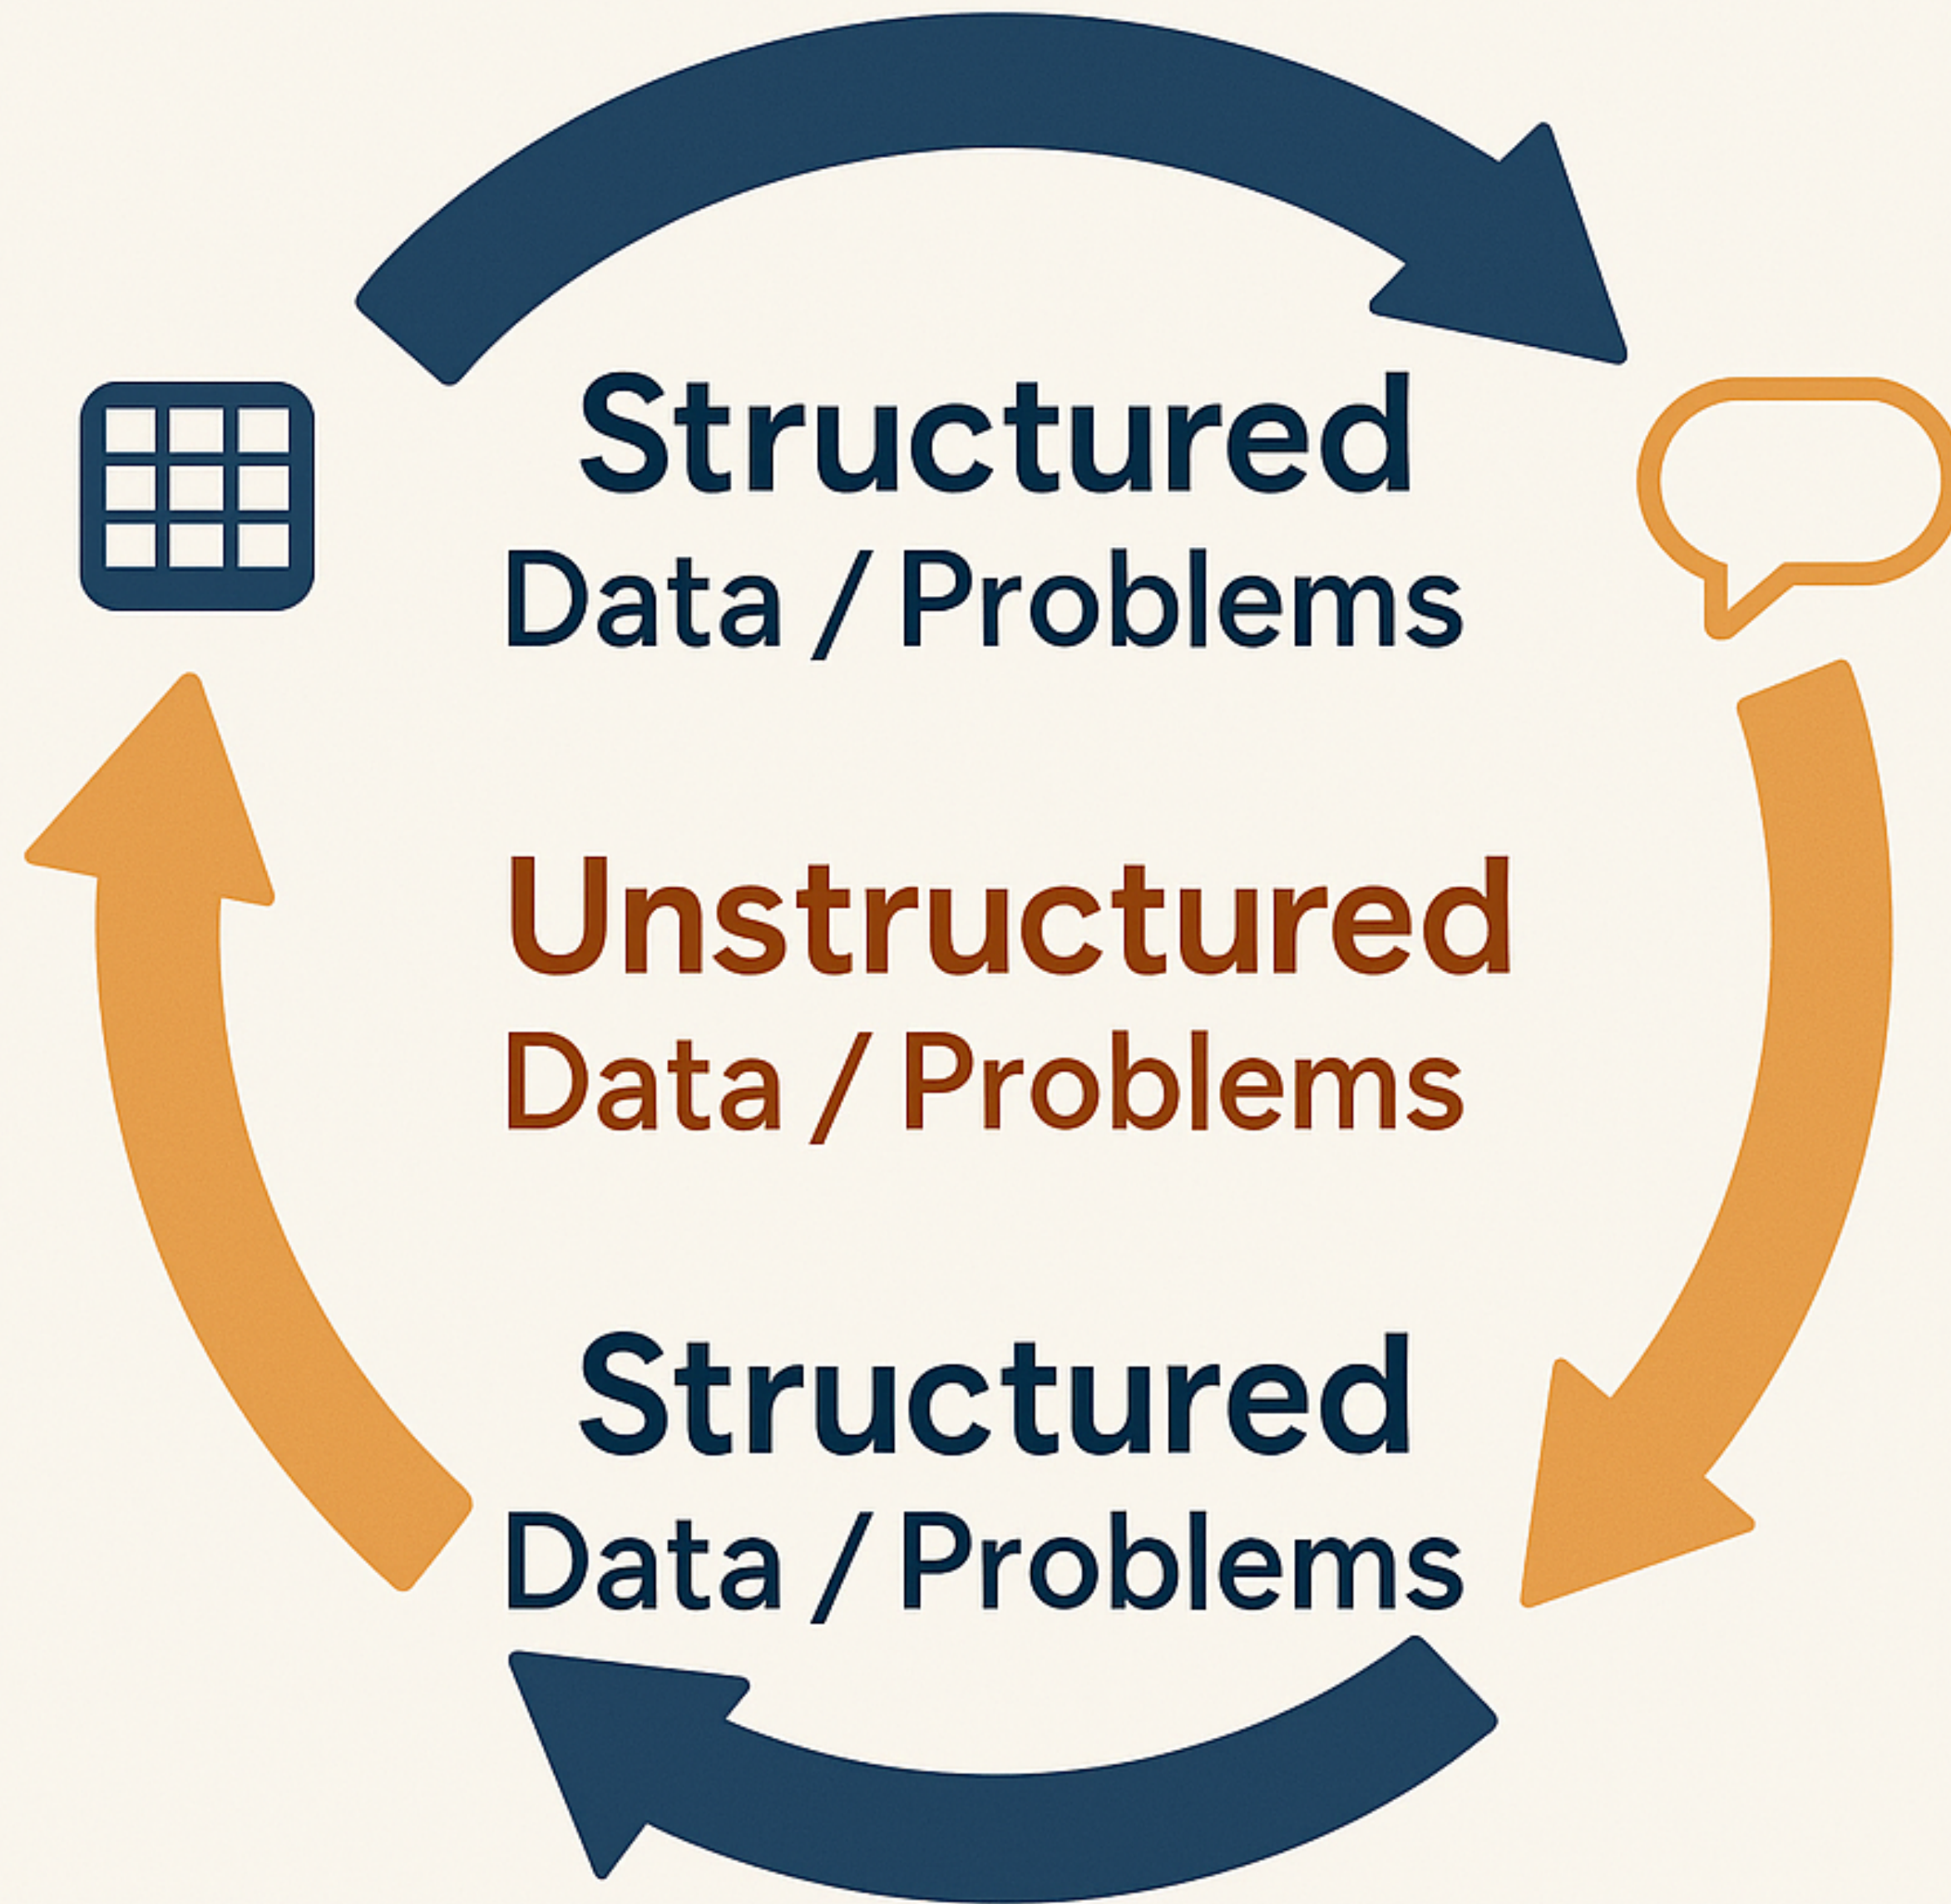

An illustration representing traditional software. It features a grey database cylinder icon to the left of a table. Below the table is a grey ruler icon. The table has 5 columns and 5 rows. The first row has headers 'B', 'C', and 'D' in the second, third, and fourth columns respectively. The second row has '1' in the first column and '1' in the fourth column. The third row has '25' in the second column and '80' in the third column. The fourth row has '45' in the second column and '45' in the fourth column. The fifth row has '62' in the fourth column.

	B	C	D	
1			1	
2	25	80		
			45	
	45		62	

Great with structured
data & rules

Image: ChatGPT

The Cycle

- Get unstructured data
- Provide some structure/context with traditional methods
- Extract structured data
- Use traditional software for processing
- Repeat

Image: ChatGPT
